GIT COMMANDS

Financial Calculators Project

REPOSITORY	BRANCH
financial-calculators-h-githubpages	main

Project location:

```
G:\Other computers\My Laptop (Post 2026)\Documents\Dev\my projects\financial-calculators-h-githubpages
```

1. OPEN THE PROJECT

```
cd "G:\Other computers\My Laptop (Post 2026)\Documents\Dev\my projects\financial-calculators-h-githubpages"
```

Use this when opening a new PowerShell window.

2. GET THE LATEST CHANGES FROM GITHUB

```
git pull
```

Use this before starting work, especially if the project may have been changed elsewhere.

3. CHECK PROJECT STATUS

```
git status
```

Shows changed files, untracked files, current branch, and synchronization status.

4. SEE YOUR CHANGES

```
git diff
```

Shows the actual changes made to the project.

```
git diff --stat
```

Shows only a summary of the changes.

5. ADD CHANGES

```
git add .
```

Adds all changes.

```
git add index.html
```

Adds one specific file.

6. SAVE CHANGES AS A COMMIT

```
git commit -m "Describe the changes"
```

Example:

```
git commit -m "Improve calculator interface"
```

7. SEND CHANGES TO GITHUB

```
git push
```

Uploads your commits to GitHub and triggers GitHub Pages deployment.

NORMAL DEVELOPMENT WORKFLOW

```
cd "G:\Other computers\My Laptop (Post 2026)\Documents\Dev\my projects\financial-calculators-h-
githubpages"
git pull

# DEVELOP AND TEST YOUR WEBSITE

git status
git add .
git commit -m "Describe the changes"
git push
```

CHECK SYNCHRONIZATION

```
git status
```

If you see "Your branch is up to date with 'origin/main'", your local project is synchronized with GitHub.

VIEW RECENT COMMITS

```
git log --oneline -5
```

Shows the five most recent commits.

```
git log --oneline
```

Shows the complete commit history.

```
git log --oneline --graph --decorate --all
```

Shows the commit history as a graph.

CHECK CURRENT BRANCH

```
git branch --show-current
```

Expected branch: main

CHECK GITHUB CONNECTION

```
git remote -v
```

Expected remote:

```
origin  https://github.com/JonathanM700/financial-calculators-h-githubpages.git (fetch)
origin  https://github.com/JonathanM700/financial-calculators-h-githubpages.git (push)
```

VIEW ALL BRANCHES

```
git branch
```

The branch marked with * is the current branch.

RECOVERY COMMANDS

Unstage a file

```
git restore --staged filename
```

Removes a file from staging without deleting your changes.

Discard uncommitted changes to one file

```
git restore filename
```

WARNING: Permanently removes your uncommitted changes to that file.

Discard all uncommitted changes

```
git restore .
```

WARNING: Permanently removes all uncommitted changes.

Temporarily save unfinished work

```
git stash
```

Temporarily saves unfinished changes.

```
git stash pop
```

Restores the most recently stashed changes.

GITHUB PAGES

After pushing changes:

```
git push
```

Check the deployment:

```
https://github.com/JonathanM700/financial-calculators-h-githubpages/actions
```

Live website:

```
https://jonathanm700.github.io/financial-calculators-h-githubpages/
```

If the live website still displays an older version after a successful deployment, perform a hard refresh:

```
Ctrl + Shift + R
```

MOST IMPORTANT COMMANDS

```
git pull
git status
git diff
git add .
git commit -m "Describe the changes"
git push
```

IMPORTANT

Do NOT run these commands again in the existing project:

```
git clone
git init
```

The project is already cloned and connected to GitHub.

DEVELOPMENT CYCLE

OPEN PROJECT	**git pull**	**DEVELOP & TEST**	**git status**	**git add .**	**git commit**	**git push**	**GITHUB PAGES**	**LIVE WEBSITE**

CORE WORKFLOW: PULL → DEVELOP → TEST → STATUS → ADD → COMMIT → PUSH
